Portfolio: krishgupta.vercel.app | GitHub: [KrishG7](#)

LinkedIn: [krish-gupta007](#) | LeetCode: [KrishGupta0007](#)

PROFILE

Third-year B.Tech Technology student at the University of Delhi, specializing in Blockchain, Cybersecurity, and Machine Learning, with hands-on experience in full-stack development and systems-level programming. Consistent competitive programmer with a strong foundation in classical ML, deep learning, and robust backend engineering.

EDUCATION

Faculty of Technology, University of Delhi New Delhi, India

Bachelor of Technology (B.Tech); 3rd Year (Batch of 2028) Aug 2024 - May 2028

- CGPA: 8.09 / 10.0 (Through 4th Semester)
- Relevant Coursework: Digital Image Processing (MATLAB), AI/ML, Computer Networks, Ethical Hacking in Linux, Theory of Computation (ToC), Applied Cryptography, Operating Systems.

Daksh Gurukul, IIT Guwahati Guwahati, India

Credit-Linked Data Science Certification (Year-long program) Completed Apr 2026

- CGPA: 6.5 / 10.0

TECHNICAL SKILLS

Languages: Python, C, JavaScript, TypeScript, Go, Oracle SQL, VHDL, MATLAB

Deep Learning & Vision: PyTorch, CNNs (ResNet, Inception, YOLOv5, EfficientNet), RNNs (LSTM, GRU), Vision Transformers (ViT), GANs, Image Segmentation

Machine Learning & NLP: Pandas, NumPy, scikit-learn, Word2Vec, GloVe, Object Detection, Time Series Forecasting

Backend & Systems: Node.js, Express, FastAPI, Linux (ptrace, Ethical Hacking, Security Libraries), System-call tracing, Docker, WebSockets, REST APIs

Databases & DevOps: MySQL, SQLite, PostgreSQL (Supabase), Git, GitHub, Railway.app, Vercel, AWS Elastic Beanstalk

Tools & Frameworks: React, Vite, Tailwind CSS, Google Earth Engine

MAJOR PROJECTS

Athena – AI Cancer Copilot

Python, FalkorDB, AutoDock Vina

github.com/healers-second-look/Athena

- Engineered a 2-tier second-opinion copilot for rare and treatment-exhausted cancers, combining clinical evidence retrieval with structural drug-response prediction.
- Built a knowledge graph in FalkorDB sourcing CIViC/PubMed data (Tier 1), falling back to computational protein-ligand docking (AutoDock Vina, mCSM-lig) to assess mutation proximity to drug binding pockets (Tier 2).

SysCV – Linux System Call Visualizer for C Programs

Go, Linux ptrace, Docker, React, Vite

github.com/KrishG7/SysCV

- Engineered a web-based tracer for C programs running in a sandboxed Docker container, using Linux **ptrace** to intercept and replay syscalls.
- Built a Go backend with architecture-specific (x86-64/ARM64) register reading to hydrate syscall arguments, streamed via WebSockets to a React Flow UI for live kernel interaction graphing.

TriNetra – Agri-Intelligence Command Center

Next.js, FastAPI, PyTorch, Google Earth Engine

github.com/KrishG7/TriNetra-Farmers-Stack

- Developed a 3-layer AI stack forecasting 7-day crop prices with 87% accuracy using a PyTorch neural network trained on Agmarknet data.
- Integrated Google Gemini 1.5 to translate raw soil health data into local-language agronomy advice and utilized Google Earth Engine (Sentinel-2) for NDVI/NDWI-based creditworthiness scoring.

Brahm-Kosh – Codebase Intelligence Engine

Python (AST), WebGL, Three.js, React

github.com/KrishG7/Brahm-Kosh

- Architected an offline static-analysis engine parsing 13 programming languages into a universal code model to detect monoliths, circular dependencies, and cross-cutting concerns.
- Built a live 3D WebGL force-graph viewer and implemented deterministic multi-hop impact analysis to identify blast radii of code changes without utilizing LLMs.

github.com/KrishG7/smart-clinic-booking

- Designed an offline-first healthcare management platform featuring live token queues, emergency (RED) interrupts, and GPS geofence check-ins.
- Engineered a robust hybrid synchronization engine utilizing local SQLite and cloud MySQL to ensure data persistence and syncing during inconsistent internet connectivity.

Stock Market Anomaly Detection

Python, Pandas, scikit-learn

github.com/KrishG7/stock-anomaly-detection

- Developed an unsupervised anomaly detection pipeline for US equities using a consensus of a threshold rule layer, K-Means clustering, and walk-forward DBSCAN.
- Implemented strict data leakage discipline, ensuring all rolling features and distribution scalings are causal and evaluated against out-of-sample market stress sessions.

Video-Tracer – Real-Time Multi-Object Tracking

Python, YOLOv8, ByteTrack, BoT-SORT, OpenCV

github.com/KrishG7/Video-Tracer

- Engineered a modular computer vision pipeline for video ingestion, automated dataset curation, and YOLOv8 training with hardware acceleration.
- Implemented real-time multi-object tracking (ByteTrack/BoT-SORT) featuring trajectory tracing, virtual ROI tripwires, and timestamped event dispatching.

CODING PROFILE & LEADERSHIP

LeetCode: [KrishGupta0007](#) (300+ problems solved, including 150+ Medium and 40+ Hard; Top 8.4% globally).

Leadership: House Captain & Valedictorian (12th); Recipient of "The Red Coat" for academic/co-curricular excellence.

Extracurriculars: Led Football & Volleyball teams; Multi-time winner in Debate and GK Quiz; Rotary Club Volunteer.
